07 Beliefs We Stand For & Melody of Our Culture

Editor's Note

SOME EDITIONS ARE ABOUT WHAT WE DO. SOME REMIND US OF WHY WE DO IT.

This edition of Suryojasvi Times is a celebration of both. With the spirit of India's Independence reflected through our tricolour theme, this month we explore ideas of purpose, courage, growth and the belief that meaningful change begins with us. From understanding who we are as the Suryojasvi Group to celebrating the journeys of our people, this edition reflects the values that connect us as one family.

What makes this edition especially meaningful are the stories of people who chose to learn, take ownership and keep growing. The five-year journeys of our colleagues remind us that careers are not defined only by designations, but by the opportunities we embrace, the challenges we overcome and the light we pass on to others. Our inspirational story of Sarvam AI echoes the same spirit at a larger level—Why not us? As Suryojasvis, may we continue to ask better questions, embrace new possibilities, use technology to create meaningful impact, and keep becoming the light that elevates industries and the world around us.

Be the Light. Spread the Light.

— Nidhi Manan

THE SURYOJASVI GROUP

The Suryojasvi Group
Elevating Industries for a better World, Innovation, Technology, Partnerships.

We exist with a *purpose.*

Guided by a clear vision and driven by our mission, we are committed to creating value that lasts for generations.

OUR VISION

To become a world-class organization devoted to **brilliance**, driving **innovation**, **elevating industries**, and creating **lasting impact.**

OUR MISSION

Elevate industries through **innovation**, **technology**, and meaningful **partnerships** that create sustainable value for customers, employees, and society.

"Vision gives us direction. | Mission gives us purpose. | People make both possible."

INNOVATE
Challenge today, create tomorrow.

COLLABORATE
Stronger together, better forever.

INSPIRE
Empower people, ignite potential.

SUCCEED
Deliver excellence, celebrate success.

SMALL IDEA. BIG DIFFERENCE.

How Shefali turned a daily reporting challenge into a smarter way of working

Sometimes, innovation doesn't start with a big project.

Sometimes, it starts with someone asking:
"Is there a simpler way to do this?"

Managing shift adherence and shrinkage across 140+ team members, multiple teams and supervisors meant that getting timely visibility was becoming a daily challenge.

Instead of accepting the manual process as "the way it has always been done," Shefali Bala decided to do something about it.

She explored how technology could help and, using Claude and Google Apps Script, built an automated Shift Adherence Report.

> ***"Sometimes, one person, one idea and the willingness to try can make a big difference."***

And today, it just happens.

Every day at **11:00 AM,** the report is automatically generated and emailed to the relevant stakeholders—**with zero manual intervention.**

The automation gives QMC leadership timely visibility into attendance, shift adherence and shrinkage, helping teams track performance, strengthen governance and make better decisions.

But the real win isn't the automation.

It's the ownership behind it.

Shefali spotted a recurring problem, took the initiative to find a better solution, experimented with technology, and turned an everyday operational challenge into something that works for everyone.

That is the kind of innovation we want to see more of across our organisation:

See a problem.
Take ownership.
Try something new.
Make it better.

A BIG SHOUT-OUT TO SHEFALI!

TRANS MON

“NOT MY EXPERTISE. BUT DEFINITELY MY RESPONSIBILITY.”

Sometimes, you don’t need to know everything. You just need to own the problem.

When one of our key clients undertook an InfoSec & Security Compliance Review of TransMon, it brought with it everything that comes with a rigorous security assessment—questionnaires, controls, policies, evidence, follow-ups and detailed technical discussions.

Clearly, it was a process that required technical expertise.

But the person who stepped forward to drive the entire process was not from a technical background.

INDRESH SAXENA

Indresh didn't try to become an InfoSec expert. Instead, he understood something far more important:

“I may not know everything about the problem, but I can take responsibility for making sure it gets solved.”

And that's exactly what he did.

He identified who needed to be involved, connected the right experts, coordinated responses, followed up on pending actions and kept the entire process moving.

He became the bridge between the requirement and the expertise needed to fulfil it.

And most importantly—he stayed with the problem until the finish line.

THE RESULT?

TransMon successfully navigated the InfoSec clearance.

What makes this story worth sharing is not just the outcome. It is the mindset behind it.

In a growing organisation, we will encounter problems that are outside our expertise. We may not always have the answers. We may not always have the technical knowledge.

But we can always choose to take ownership.

Because expertise may help solve a part of the problem, but ownership ensures that the problem doesn't get lost between people, teams or responsibilities.

OWNERSHIP IN ACTION

Indresh's story reminds us:

You don't always have to be the expert.

Be the person who makes sure the problem gets solved.

Well done, Indresh!

A wonderful example of Ownership in Action.

WHEN TRUST TURNS INTO GROWTH

Jeevan Singh

MEET THE PERSON BEHIND THE RELATIONSHIP.

-JEEVAN SINGH (FROM ACCOUNT MANAGEMENT TO RELATIONSHIP BUILDING.

Some customer renewals are about continuing a contract.

Others tell you that the relationship has become something much bigger.

The latest RTDS renewal is one of those stories.

After three years of working together, the partnership has come back stronger—with a ~93% increase in commercial value and a shift from bi-annual advance billing to annual advance billing.
Behind that growth is something that cannot be captured in a contract value: trust.

For the past three years, Jeevan Singh has been closely managing the RTDS relationship. Through regular engagement, understanding the customer's needs and consistently focusing on delivering value, Jeevan has helped nurture the relationship well beyond the transactional side of an account.

And that consistency matters.

Because customers may sign a contract once, but they choose to continue working with us because of the experience we create along the way.

— THE BIG NUMBER
~93%
INCREASE IN COMMERCIAL VALUE

The latest renewal is a strong reflection of that confidence—and a great reminder that when we consistently create value and invest in relationships, growth follows.

— A BETTER COMMERCIAL MODEL
BI-ANNUAL → ANNUAL
ADVANCE BILLING UPGRADED TO ANNUAL ADVANCE

A big congratulations to Jeevan and everyone behind the RTDS relationship for making this win possible.

Here's to relationships that don't just renew—but grow.

The past month has brought another encouraging milestone for Trasccon, as several leading organizations have entrusted us with new projects across diverse industries including Aerospace & Defence, Industrial Automation, Electronics Manufacturing, Engineering Services, Data Centres, and Technology Solutions.

These partnerships are a testament to the confidence our customers place in Trasccon's engineering expertise, quality standards, and commitment to delivering reliable interconnection solutions. Every new project not only reflects our technical capabilities but also strengthens long-term relationships built on trust, innovation, and consistent execution.

As we continue to expand our footprint across strategic sectors, each project opens new opportunities to learn, innovate, and contribute to the success of our customers. Together, these collaborations move us one step closer to our vision of becoming a globally respected manufacturing and technology partner.

New Projects for Trasccon:

- FTK Solutions - Israel
- Larsen & Toubro Limited – Bangalore
- Bharat Electronics Limited – MCE
- Arnier Communication Limited - Israel
- Electro Galil Limited - Israel
- Brahmos Aerospace - Hyderabad

SURYOJASVI GROUPS CELEBRATION

INDEPENDENCE DAY

The spirit of Independence Day came alive at our Wyzmindz Bangalore & Noida office, as the workspace bloomed with vibrant hues of saffron, white, and green. The festive décor, adorned with cheerful balloons, created an atmosphere of pride and joy — and the sweetness of the occasion was shared with everyone through a delightful distribution of sweet treats.

A special mention about Decoration Committee Members in Noida and in Bangalore office who did a great job in brining in the Independence day spirit:

- The entire QMC teams
- Vishal Anand
- Navaneeth
- Gagan
- Padmanabha Joshi
- Poornachandra
- Sinchana

BADGE OF HONOR

Celebrating the Spirit of Suryojasvi!

Every month, on a spirited Saturday, we come together for something that is uniquely Suryojasvi — the WOW Festival!

But WOW is more than a celebration.
It is a celebration of people.

WHAT MAKES A WOW MOMENT?

- Helping someone when it mattered most
- Solving a problem and making things better
- Learning something new and sharing it with others
- Teaching a skill that empowers someone
- Creating an idea or innovation that adds real value

Because at Suryojasvi, impact isn't always measured by how big the action is. Sometimes, it's measured by the difference it makes.

WHY WOW MATTERS
In the rhythm of everyday work, many meaningful contributions can go unnoticed — a helping hand, an extra effort, a thoughtful idea, a moment of initiative.

WOW gives us a reason to pause.
To notice.
To appreciate.
To celebrate.

And when we celebrate these moments, we reinforce the culture we want to build — a culture of collaboration, learning, innovation, empathy and ownership.

Because recognition doesn't just appreciate yesterday's contribution.

It inspires tomorrow's contribution.

So, here's to our WOW-makers!

Keep showing up. Keep making a difference.

Keep spreading the spark.

**"Because WOW isn't just something we celebrate.
It's something we create."**

CELEBRATING OUR AUGUST STARS!

August brought sunshine, smiles, and another reason to celebrate — our wonderful colleagues who added another beautiful year to their journey!

The celebration was filled with laughter, warm wishes, cheerful conversations, and, of course, cake! But beyond the candles and celebrations, it was about something even more special — coming together as one Suryojasvi family.

At Suryojasvi, birthdays are more than just a date on the calendar. They are a moment to pause, celebrate the person, appreciate their journey, and create memories together.

Because what makes our workplace special isn't just the work we do — it's the people we share it with.

TO OUR AUGUST-BORN STARS...
May the year ahead bring you new dreams, meaningful moments, endless growth, and plenty of reasons to smile!

Keep shining. Keep inspiring. Keep spreading the light.

Seven Years at Trascon — A Journey of Learning, Growth & Gratitude

- C Akash

Seven years ago, I stepped into Trasccon as a fresher—nervous, curious, and completely unaware of the journey ahead. Like any fresher, I started with enthusiasm, curiosity, and a lot to learn. What I didn't know then was that this journey would become one of the most meaningful chapters of my professional life.

As a fresher, everything was new—the systems, the people, the work culture, and the pace of real work after years of textbooks. I am grateful that we were the first batch of freshers to receive training across all departments and learn from all the HODs. From my early days to the present, every stage of this journey has brought new experiences, challenges, responsibilities, and opportunities to grow.

The initial years were all about learning the fundamentals—understanding the work, adapting to a professional environment, taking ownership, and learning from the people around me. Over time, I was given opportunities to handle greater responsibilities, work on challenging assignments, collaborate with different teams, and, most importantly, learn from both successes and setbacks.

One of the biggest things I have learned during these seven years is that growth is not just about moving into a new role. It is about becoming more confident, responsible, adaptable, and willing to learn every day.

My journey here has been possible because of the guidance and support of my seniors, the encouragement of my colleagues, and the teamwork of everyone I have had the opportunity to work with. Each person and every experience have contributed in some way to who I am professionally today.

Looking back, I feel proud of how far I have come, but I am equally excited about how much more there is to learn and achieve. This journey has taught me to embrace challenges, value teamwork, stay grounded, and keep improving.

Seven years at Trasccon is not just a career milestone for me—it is a collection of memories, relationships, lessons, challenges, achievements, and countless learning moments.

My sincere thanks to **Singh Sir, Vishi Sir, Rudrappa Sir, and Mahi Sir** for providing me with the opportunity, direction, and guidance in both my professional and personal life. My heartfelt thanks also to my seniors—**Manoj Sir, Sridhar Sir, Harish Sir, Girish Sir, Nishanth Sir, Mahindra Sir, Ananda Sir, Prasanna Sir, and Nagaraj Sir**—for their valuable suggestions, support, and guidance in different aspects of my journey.

A special thanks to all my fellow colleagues who have been an important part of this journey. Your support, teamwork, encouragement, and the memories we have created together have made these seven years even more special. Every interaction, challenge, achievement, and shared experience has contributed to making this journey memorable.

As I look ahead, I carry with me the experiences of the past seven years and the confidence to take on new challenges. I am grateful to Trasccon for providing me with the platform to learn, grow, and evolve.

Here's to seven years of learning, growth, and memories—and to many more milestones ahead!

Grateful for the journey. Excited for what's next.

Five Years, Countless Moments, One Incredible Journey

- By Mahak Singh

When I think about that number, I realise how much can change in five years — and how little I knew about where this journey would take me when I started.

It was during COVID when I was looking for a job. Someone gave me Sachin Sir's number, so I called him. He simply said, "I'll call you back," and hung up. I remember thinking, maybe there's no requirement and I probably won't get a call back.

But later that same day, my phone rang. It was ***Sachin Sir***. And what surprised me even more was that he remembered my name.

He interviewed me and then asked if I would be willing to appear for another interview with one of his clients. I said yes. That client was Lenskart, and after clearing the interview, I started my journey with Wyzmindz as a QA.

For the first year, I learned a lot. But eventually, I realised I wasn't enjoying the role anymore. I wanted to try something different. So, instead of quietly looking for something else, I went directly to Sachin Sir and told him, "I'm bored. I want to try something new."

And once again, I was given an opportunity.

I joined TransMon's backend team under **Asim Sir**. That phase taught me how TransMon actually worked from the inside. I worked on different clients, supported their requirements and slowly started understanding the product and the business.

Then one day, I received a call from one of the leadership members saying that TransMon wanted to start international outreach and they wanted me to be part of the team.

Without a second thought, I said yes.

I have always been someone who enjoys challenges and new things more than doing the same job every day. And that “yes” started another completely different chapter.

I stepped into sales and marketing — something I had never formally done before. I went from lead generation and building sales pipelines to participating in discussions with international clients, creating marketing creatives, managing social media, writing blogs and figuring out how to position and sell our product.

It was a lot.

But honestly, I was having fun.

I realised that I enjoyed being an all-rounder. I enjoyed learning something today that I had never even heard of yesterday. And I am genuinely grateful to Wyzmindz for never restricting me to a job description or telling me, “This is what you do, so stay within this boundary.”

And then something even bigger happened.

AI started becoming the conversation everywhere.

When we were encouraged to explore ChatGPT in our daily work, while many of us were using it to make work easier, I became curious about what else it could do. That curiosity took me into a completely new journey with the TransMon product team.

I started experimenting with building logics and generating results for AutoQA.

Coming from a non-coding background with almost no technical knowledge, it was a complete trial-and-error journey. I would create a logic, test it, see the result, find what went wrong, change it and try again.

And somehow, I loved every minute of it.

There were days when I would spend 9–10 hours just working on generating and improving results, completely losing track of time. It didn’t feel like work because I was genuinely excited about what we were building.

Looking back, I can proudly say that I had a fair contribution towards building TransMon’s AutoQA and BRCP capabilities. And I was fortunate to do that alongside an incredible team — with the guidance of **Jeevan Sir** and the support of an extremely talented backend team led by **Pratima** and others.

That phase was a turning point for me because I discovered a completely new skill set at a time when AI itself was just beginning to transform the way we worked.

And then came the AI Festival competition.

Coming from a non-technical background and having zero coding experience, I thought, why not try?

So I researched, experimented and started building an AI Copilot for Sales & Marketing from scratch.

Once again, I was learning as I went.

And then came the moment I wasn't expecting — I actually made it to the Top 3 of the competition.

That feeling was special because it wasn't just about winning. It was proof to me that sometimes you don't need to know everything before you start. You just need someone to give you the opportunity — and the courage to try.

And Wyzmindz kept giving me those opportunities.

In October 2025, I got another opportunity that I will always remember — travelling to Dubai for GITEX.

Standing there on an international platform and representing a product that I had actually been a part of building was an incredibly proud moment.

I still remember the fun, the chaos and the memories from that trip with **Jeevan Sir**, **Anurag** and **Damodar**. It was one of those experiences that made me stop and think,

Wow, look how far I've come.

And then came Dharamshala.

Our office trip this year was something I didn't realise I needed as much as I did. For the first time, I got the opportunity to actually spend time with the entire team outside of work.

Some people I had already met, while with others, my only interaction had been through Google Meet.

Meeting everyone in person, laughing together, travelling together and simply spending time without discussing work helped me build connections that I will always cherish.
I came back from Dharamshala feeling completely recharged.

And with one goal in my mind — to bring international clients to TransMon.

We haven't cracked it yet.

But I know we will.

Because if these five years have taught me anything, it is that I don't need to have everything figured out before I start. I just need to be willing to take the next opportunity, learn, experiment and keep going.

Looking back at these five years, I feel incredibly grateful.

- Grateful for the opportunities.
- Grateful for the people.
- Grateful for every role that taught me something new.
- Grateful for every challenge that pushed me outside my comfort zone.

And most importantly, grateful for the people who believed in me along the way.

A very special thank you to ***Sachin Manan***.

Thank you for believing in me, especially during the moments when I needed that belief the most. Thank you for giving me opportunities even when I didn't always have the confidence to believe I was ready for them. Your trust, guidance and mentorship have played a much bigger role in my growth than I can probably put into words.

I will always be grateful to have a mentor like you.

Five years ago, I was just looking for a job during COVID.

Today, I look back and realise I found much more than a job.

I found opportunities I never imagined, skills I never thought I would learn, people I will always remember, and a confidence in myself that I didn't have when I started.

TransMon has been a turning point in my life.

And if the last five years have taught me anything, it's this:

Never underestimate what can happen when you keep saying yes to opportunities.

Here's to five years — and to everything still waiting to be built.

--- ***MAHAK SINGH***

FIVE YEARS OF BECOMING

Be the Light. Spread the Light.

-By Pratima Prasad

Five years can be measured in years, designations, projects, responsibilities and achievements.

But for me, these five years are better measured in something less visible — how much I have changed as a person.

When I look back at where I started and where I stand today, I don't see a straight line. I see a journey filled with opportunities, people, challenges, learning, self-discovery and moments that quietly changed the way I think.

And perhaps that is what makes this journey special.

WHERE IT ALL BEGAN

My journey began on 19 June 2019, when I joined the organisation as an Assistant Manager, working primarily on automating Excel-based workflows using SQL.

At that time, my world revolved around SQL, Excel, VBA and automation.

I also came with a very different mindset about careers. In my previous organisation, I had been told that if I wanted to grow my salary, I should keep switching organisations frequently. I had almost made that my way of thinking — I was not someone who expected to stay in one organisation for a long time.

But somewhere along this journey, that changed.

I found opportunities here that made me want to stay, learn and build.

THE OPPORTUNITY TO BRING CHANGE

One thing I realised early was that I have always wanted an opportunity to bring change.

I am naturally calm and polite, and I have always valued an environment where people respect and support each other. In the early days, people like Rohit Meena, Daljeet, Maninder and Asmith became an important part of my journey.

Over time, I realised something even more meaningful:

Almost every person in the organisation has influenced my journey in some way.

- Sometimes through guidance.
- Sometimes through a challenge.
- Sometimes simply through the trust they placed in me.

That trust became one of the strongest foundations of my growth.

A JOURNEY THAT WASN'T ALWAYS CONTINUOUS

My journey also had a pause.

I worked until 31 December 2020 and later rejoined the organisation on 9 August 2021.

Life was changing personally as well as professionally. One of the concerns I had carried with me was whether I would receive the understanding and support I needed during an important phase of my life.

The organisation's approach to Work From Home became much more than a workplace policy for me. It gave me an opportunity to build a meaningful professional life without having to compromise the personal side of my life.

During this journey, I was blessed with two beautiful daughters.

Looking back, I am deeply grateful that I could experience both — growing professionally while being present for some of the most precious moments of my personal life.

That balance has become an important part of my definition of success.

FROM SUPPORTING A TEAM TO BUILDING SOLUTIONS

Perhaps the biggest professional transformation has been the change in my responsibilities.

I started by supporting a team and automating workflows. Gradually, I moved towards individually building products and solutions with the support of the BI team.

I still remember initiatives such as Airtel logic automation and OYO sampling logic automation using VBA and SQL.

But the real transformation was not in the tools.

It was in the way I started looking at problems.

Earlier, I waited for someone to give me a task.

Today, I want to understand the problem before waiting for the task.

Earlier, I waited for someone to bring me a problem statement.

Today, I want to discover the problem myself.

That, for me, is the difference between doing work and taking ownership.

THE PEOPLE WHO BECAME HEADLIGHTS

No personal journey is ever truly personal.

There are always people who become headlights when the road is unclear.

For me, ***Chetan Sir*** has been one of those headlights.

His guidance, introduction to concepts such as the Johari Window, and exposure to different tools and ways of thinking helped me understand that professional growth is not only about technical capability.

It is also about becoming more aware of yourself, understanding others, thinking differently and learning how to lead a meaningful and productive life.

And then there are ***Jeevan ji*** and ***Sachin Sir***.

I often think of them as the Jambavan of my journey.

In the story of Hanuman ji, Jambavan did not give Hanuman ji his strength. He helped Hanuman remember the strength that was already within him.

In much the same way, their guidance, trust and encouragement helped me recognise capabilities in myself that I sometimes failed to see.

Sometimes, what we need is not someone to tell us what to do.

We need someone who reminds us of what we are capable of.

I have also received immense faith and support from ***Mahi Sir, Rudrappa Sir, Vishi Sir, Naveen Sir*** and many others who became part of this journey in different ways.

They are not simply names in my career story. They are part of the reason I am still walking this journey.

WHEN A CHALLENGE BECAME A TURNING POINT

Every journey has moments of doubt.

One such phase came when OpsGuru was being offered as a free offering along with TransMon, and there were many doubts surrounding the product.

Somewhere inside, I began feeling that the work my team and I were doing was not enough — we had much more capability.

It was easy to remain disappointed.

Instead, we chose to ask a different question:

“What can we build that creates significant value in the market?”

We came together as a team.
We divided responsibilities.
We started building.

That experience taught me something I carry with me even today:

No matter what the situation is, if we genuinely decide that we have to accomplish something, we can keep moving without getting tired.

Sometimes challenges don't come to stop us.

Sometimes they come to show us what we are capable of building.

FROM TASKS TO SYSTEMS

The biggest transformation in me has been my thinking capability.

I am learning to think in systems rather than isolated tasks.

I am learning to look beyond symptoms and understand the source.

I am learning that a good solution is not simply one that works technically — it must also solve a meaningful problem.

And I am learning what leadership really means.

Leadership, I increasingly believe, is not about having people report to you.

It is about:

- Creating clarity.
- Taking ownership.
- Enabling people.
- Learning continuously.
- Helping others discover their own potential.

WHAT DOES “WORLD CLASS” MEAN TO ME?

Five years ago, success meant doing my work well.

Today, my aspiration is much larger.

For me, being World Class means building something that goes beyond our immediate boundaries. It means creating a product or solution that solves a real problem, creates measurable value and has global impact.

That is why my professional aspiration today is clear:

“To become a World-Class AI & BI Solution Professional.”

I don't want to merely use technology.

I want to understand it deeply enough to use it to solve real business problems and build products that stand the test of time.

THE NEXT FIVE YEARS

If my first five years were about: **‘Supporting a Product’**

I want my next five years to be about: **‘Architecting Products**.’

I want to develop the depth, breadth and leadership capability required to become an expert in AI and BI solutions.

But my ambition goes beyond becoming an expert.

I want to build an everlasting product — a product that creates meaningful global impact and continues to remain valuable in the market for a long time.

And if I can do that while helping the organisation transform, grow and become stronger, that would make the journey even more meaningful.

WHAT I WANT TO LEAVE BEHIND

If someone asks me what I want people to remember me for, my answer is simple:

Learner. Contributor.

I don't want my journey to be remembered only through products I built or projects I completed.

I want it to be remembered through the knowledge I shared, the people I helped, the problems I solved and the contribution I made to something larger than myself.

Because learning that stops with us has limited value.

But learning that is shared becomes a light for someone else.

FIVE YEARS LATER

Five years ago, I joined with a set of technical skills.

Today, I carry something much more valuable — a different way of thinking.

I have learned that careers are not built only through designations.

They are built through people, opportunities, challenges, trust and the courage to keep learning.

I have learned that recognition is not always the starting point for contribution.

Sometimes, contribution has to come first.

I have learned that ownership means moving from:

“Give me a task.”
to:
“Give me a problem — or let me discover one.”

And perhaps most importantly, I have learned that growth becomes meaningful when it creates growth around us.

That is the philosophy I want to carry into the next chapter of my journey.

BE THE LIGHT. SPREAD THE LIGHT.

I have received light from many people throughout these five years.

My hope is that, in whatever way I can, I will continue to pass that light forward.

“Five years were about supporting a product. The next five are about architecting products.”

“The journey so far has been about becoming. The journey ahead is about creating impact.”

“SOMETIMES, WHAT WE NEED IS NOT SOMEONE TO TELL US WHAT TO DO.

WE NEED SOMEONE WHO REMINDS US OF WHAT WE ARE CAPABLE OF.”

INSPIRATIONAL STORY

What If India Could Build Its Own AI?

The story of Sarvam AI, Vivek Raghavan and Pratyush Kumar

sarvam
AI for India | From India

There are moments in history when a new technology arrives and changes the question from "What can we do with it?" to "Who gets to build it?"

When generative AI began transforming the world, two Indian technologists—Dr. Vivek Raghavan and Dr. Pratyush Kumar—asked themselves a deceptively simple question:

Why shouldn't India build its own?

That question became **Sarvam AI**.

Founded in 2023, Sarvam set out with an audacious ambition: to build AI for India, from India—AI that could understand the country's languages, voices, documents, contexts and realities. The name Sarvam means "all" in Sanskrit. The idea was equally expansive: make powerful AI accessible to everyone, not just to those who speak English or live in the world's technology centres.

Two journeys. One audacious idea.

The story becomes even more inspiring when you look at the two people behind it.

Dr. Vivek Raghavan

After studying at IIT Delhi and Carnegie Mellon University, he built companies in electronic design automation before returning to India. He played a significant role in the technology behind Aadhaar, India's digital identity infrastructure, and later worked across India's digital public infrastructure and language-technology ecosystem.

One brought decades of experience in building systems that could work at India's scale.

Dr. Pratyush Kumar

An IIT Bombay alumnus with a PhD from ETH Zurich, he worked at IBM Research and Microsoft Research and later became associated with IIT Madras. He was also a driving force behind AI4Bharat, focused on building open-source AI capabilities for Indian languages.

The other brought deep expertise in AI research and India's linguistic diversity.

Together, they saw something others could easily have missed:

India didn't just need AI. India needed AI that understood India.

From a Question to a National Mission

Sarvam's approach was different. It wasn't just about building a chatbot. It was about building an ecosystem — speech recognition, translation, voice, **document intelligence, AI agents, enterprise applications, public services and infrastructure**. More than a model, it was a **platform** for India.

> "There's no reason we can't do these things in India."
> — **Vivek Raghavan**

The World Didn't Believe Them

The biggest tech companies were spending billions, employing massive teams. Could an Indian startup really compete? The founders knew the gap existed, but they challenged the assumption that groundbreaking technology could only emerge from Silicon Valley or a few global centres.

> "Not arrogance. Not imitation. Just belief."

From an Idea to a National Ambition

December 2023.
Sarvam raised **$41 million in Series A funding,** one of the largest for an Indian AI startup at the time.

Part of India's Sovereign AI Efforts
Working on models designed for Indian languages and use cases, with applications across speech, documents, translation, conversational AI and more.

June 2026
Sarvam announced a **$300 million Series B,** with a **first close of $234 million** at a **$1.5 billion** post-money valuation. The capital will fuel frontier model research, compute and AI systems for enterprises, developers and government.

> India can build world-class technology while solving uniquely Indian problems.

Vivek Raghavan & Pratyush Kumar
Sarvam AI

The Lesson for All of Us

The Sarvam story is not only about AI— it's about a mindset. They didn't begin with certainty. **They began with a possibility.**

They asked not,
"Can we?"
But,
"Why not us?"

A reminder for all of us:
You don't have to wait for the world to build the future you want to live in. Sometimes, you have to decide **to build it yourself.**

And What Does This Mean for Us as Suryojasvis?

The Sarvam story inspires us to look at everyday challenges and ask, **"Is there a better way?"**

Let's use technology not just because it's new, but because it can help us think bigger, simplify the complex, serve our customers better and create value at scale.

Most importantly, it reminds us that we don't have to have all the answers. We can start with curiosity, take ownership, learn along the way and have the courage to believe that a better solution can come from us.

> Sometimes, the next big idea is hidden inside a problem we encounter every day.

BELIEFS WE STAND FOR
&
MELODY OF OUR CULTURE

Crystal Clear Identity, *Daily Remembered*

Every organisation has rituals, but at Suryojasvi, we have something deeper— a daily moment that reconnects us to our identity, our purpose, and our shared destiny.

Every day at 11:00 AM, across all our companies, one powerful practice unites us:

- We play the Suryojasvi Song.
- We recite the Suryojasvi Mahavakyas.

These are not just words or melodies. They are the soul of who we are, the codes we live by, and the values that shape us.

In a world full of noise, speed, and constant change, this daily ritual becomes a pause—

- a moment to return to our center
- to remember what we stand for
- to realign with the brilliance we are committed to becoming.

The Suryojasvi Song reminds us of our spirit of our joy, our unity, our courage, and our commitment to be increasingly useful, grateful, and joyful.

It binds us together as one family with one purpose.

The Suryojasvi Mahavakyas remind us of our promises—
to learn, to serve, to solve, to create, and to become the light that elevates industries and the world around us.

Through these daily practices, we reaffirm:

- We are Suryojasvis.
- We are devoted to brilliance.
- We rise with purpose.
- We walk together.

And we build, every day, a world-class organisation guided by intention, humility, and service.

This ritual is more than a habit.

The Suryojasvi Mahavakyas

1. I am a Suryojasvi – Devoted to Brilliance in my Profession.
2. I am Grateful & feel Blessed for my Customers, my Team & my Responsibilities.
3. Everyday I am focused & Inspired:
4. To Learn & Spread Skills & Knowledge
5. To Solve Ever Larger Challenges
6. To create greater happiness, success & abundance
7. To be more and more useful to my team, clients and the World
8. Wisdom & Grace shines through me in my thought, word, and deed
9. I keep my word and my promise.
10. I am a Suryojasvi, We are Suryojasvis.

Appo Deepo Bhava!

Be the Light and Spread the Light

SURYOJASVI SONG

Suryojasvi, Suryojasvi, Suryojasvi Hum
Aao Milkey Saath Chalen, Jug roshan Karden hum!
Hum!
Suryojasvi, Suryojasvi, Suryojasvi Hum

Learning Everyday Improving Everyway!
Suryojasvis simply are “Devoted To
Brilliance”!!Hum!
Suryojasvi, Suryojasvi, Suryojasvi Hum

Ho Koi Problem, Kitni bhi Complex
Breakdown karke solve karen
Hain Suryojasvi Hum. Hum!
Suryojasvi, Suryojasvi, Suryojasvi Hum

Increasingly Useful, Grateful and Joyful
Be the light & Spread the light
Be Brilliant Like the Sun. Hum!

Suryojasvi, Suryojasvi, Suryojasvi Hum
Suryojasvi Main, Suryojasvi Tum
Suryojasvi Hain, Hain Hum
